Revision History

Name	Date	Reason For Changes	Version

1. Project Overview

This section establishes the context, boundaries, and stakeholders for this Software Requirements Specification. It should be read by all stakeholders before reviewing the detailed requirements.

1.1 Purpose

*This Software Requirements Specification (SRS) translates the business-level requirements defined in the BRD (DOC-05) into system-level functional and non-functional requirements that the engineering team can implement directly. It defines **what** the TaskFlow system must do (observable behaviour) without prescribing **how** it should be built (implementation details).*

The SRS covers the five Q2/2025 features: FT-007 (Permission Refactor), FT-002 (Time Tracking), FT-001 (Export Excel/PDF), FT-006 (Bulk Action), and FT-003 (Notification System). Each requirement is assigned a unique ID (FR- or NFR-) and is traceable to the originating Business Objective (BO-1 or BO-2) and Use Case (UC-) defined in the BRD.

1.2 Scope

In Scope:

1. Time logging (timer and manual entry), project-level hour aggregation, and client billing summary — FT-002.
2. Data export to .xlsx and .pdf for 3 report view types (Task List, Project Progress Summary, Team Workload) — FT-001.
3. Real-time in-app and email notifications for 4 trigger types (assignment, overdue, comment, status change) with user preference panel — FT-003.
4. Multi-task selection with bulk status change, reassignment, due date update, and deletion — FT-006.
5. Permission Module refactoring to support 5 fixed roles (Owner, Admin, PM, Member, Client) — FT-007.

Out of Scope:

1. Mobile-native application (deferred to Q3 — FT-004).
2. Public REST API for third-party integrations (deferred to Q3 — FT-005).

3. Advanced Analytics Dashboard (deferred to Q3 — FT-005).
4. Zalo, Slack, or push notification channels for FT-003.
5. Export view types beyond the 3 MVP types (remaining 9 deferred to Q3).
6. Per-task or per-role hourly rate configuration (MVP uses single rate per project).

1.3 Stakeholders

ID	Name	Role	Responsibility in SRS Context
SH-01	Minh Khoa	CEO / Co-founder	Final approval authority. Signs off on SRS before Sprint 2 kickoff.
SH-02	Thu Hang	Head of Sales	Validates FT-001 and FT-002 requirements against customer expectations.
SH-03	Bao Trung	Tech Lead	Reviews all FR- and NFR- for technical feasibility. Co-authors data model section.
SH-04	Linh Phuong	Customer Success Manager	Validates FT-003 notification triggers against top support ticket categories.

1.4 Success Criteria

ID	Criterion	Measurement	Target
SC-01	All functional requirements are testable	QA team confirms a test case (TC-) can be written for each FR-	100% coverage
SC-02	All requirements trace to a Business Objective	Traceability Matrix (Section 8) has no orphan requirements	100% traceability
SC-03	SRS approved by all stakeholders before Sprint 2	Sign-off table completed	By 07/04/2025
SC-04	Zero ambiguous requirements at sign-off	Tech Lead (SH-03) confirms no "TBD" or unclear phrasing remains	0 open items

2. User Roles and Personas

This section defines the user types who will interact with the Q2 features. Each role maps to the Permission Module (FT-007) and determines access control for all functional requirements.

Role	Description	Goals	Pain Points (Current)	Q2 Features Affected
Owner	Agency Director or company founder who owns the TaskFlow account. Full administrative access.	View billing summaries, manage account-level settings, export client reports.	Cannot generate client invoices from TaskFlow — must use Toggl + manual Excel reconciliation.	FT-002, FT-001, FT-007
Admin	Senior manager with elevated permissions. Can manage users and projects but cannot delete the account.	Manage team access, view billing data, configure notification settings at org level.	No visibility into team time allocation across projects.	FT-002, FT-001, FT-003, FT-007
Project Manager (PM)	Team lead responsible for project delivery. Manages tasks, assigns work, tracks progress.	Assign tasks efficiently, track project progress, export reports for clients, receive overdue alerts.	Sprint-end bulk status updates take 15–20 minutes. Relies on Zalo for status communication.	FT-001, FT-002, FT-003, FT-006
Member	Individual contributor who works on assigned tasks. Cannot manage other users or view billing.	View assigned tasks, log time worked, receive task notifications.	Misses task assignment updates because Zalo messages get buried in group chat.	FT-002, FT-003, FT-006 (limited)
Client	External stakeholder (agency client) with read-only access to	View project progress, download shared reports.	Receives reports via email attachment — no real-time visibility into	FT-001 (read-only export)

Role	Description	Goals	Pain Points (Current)	Q2 Features Affected
	specific project views. Cannot modify any data.		project status.	access), FT-007

Permission Precedence: Owner > Admin > PM > Member > Client. Each role inherits all permissions of the roles below it, except Client which has an isolated read-only permission set. Full permission matrix is defined in Scope Document (DOC-03) Section 6.

3. Functional Requirements

This section defines system-level functional requirements grouped by feature. Each requirement uses a unique FR- ID, describes observable system behaviour (WHAT, not HOW), and includes acceptance criteria in Given/When/Then format.

3.1 FT-007: Permission Module Refactor

The system shall enforce a role-based access control model supporting five fixed roles. This is an internal technical requirement — no user-visible feature changes.

ID	Requirement	Priority	Traces To
FR-001	The system shall enforce exactly five permission roles: Owner, Admin, Project Manager, Member, and Client.	Must	BO-1, BO-2
FR-002	The system shall apply role-based access control checks on every API endpoint and UI component before rendering data or executing actions.	Must	BO-1
FR-003	The system shall prevent a user from performing any action that exceeds the permissions of their assigned role, returning a standardised 403 Forbidden response.	Must	BO-1
FR-004	The system shall allow an Owner to assign or change the role of any user within their account, except the Owner role itself which requires a separate	Must	BO-1

ID	Requirement	Priority	Traces To
	ownership transfer flow.		
FR-005	The system shall pass 100% of the defined regression test cases for the existing task management, project management, and user management modules after the refactor is applied.	Must	BO-1

Acceptance Criteria:

1. Given a Member user, when they attempt to access the Billing Summary page, then the system shall display an "Access Denied" message and not render any billing data.
2. Given an Owner user, when they change a user's role from Member to PM, then the PM's navigation menu shall immediately reflect the expanded permissions without requiring logout.
3. Given the refactored Permission Module deployed, when all existing regression test cases are executed, then 100% shall pass with no critical or high-severity failures.

3.2 FT-002: Time Tracking

The system shall allow users to log, view, and aggregate time spent on tasks for client billing purposes.

ID	Requirement	Priority	Traces To
FR-006	The system shall allow an assigned Team Member to start a timer on a task that is in "In Progress" status. Only one timer per user may be active at any time.	Must	BO-2, UC-001
FR-007	The system shall allow an assigned Team Member to stop the active timer, automatically calculating the elapsed duration in minutes and saving it as a time log entry with date, user ID, and task ID.	Must	BO-2, UC-001
FR-008	The system shall allow an assigned Team Member to manually add a time log entry by specifying: date, duration (in hours and minutes), and an	Must	BO-2, UC-002

ID	Requirement	Priority	Traces To
	optional text note (max 500 characters).		
FR-009	The system shall reject manual time entries with a duration of zero or a future date, displaying a validation error message.	Must	BO-2, UC-002
FR-010	The system shall allow a PM or above to view a Project Time Summary table showing: team member name, total hours logged, and number of tasks with time entries — aggregated for the selected date range.	Must	BO-2, UC-003
FR-011	The system shall allow an Owner or Admin to set a single hourly rate (in VND) per project. This rate shall be used to calculate the billing summary.	Must	BO-2, UC-004
FR-012	The system shall allow an Owner or Admin to view a Client Billing Summary showing: total hours per project × hourly rate = billable amount, grouped by billing period (weekly or monthly, selectable).	Must	BO-2, UC-004
FR-013	The system shall allow a PM or above to edit or delete their own time log entries within 48 hours of creation. Entries older than 48 hours shall be locked and require Admin approval to modify.	Should	BO-2
FR-014	The system shall persist a full audit trail for every time log entry: creation timestamp, last modified timestamp, modified by user, and deletion flag (soft delete).	Must	BO-2

3.3 FT-001: Export Excel/PDF

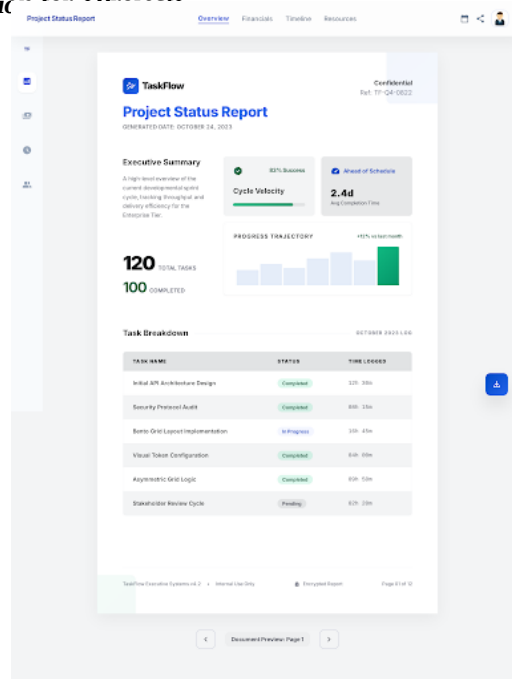

The system shall allow authorised users to export structured project data in .xlsx and .pdf formats.

ID	Requirement	Priority	Traces To
FR-015	The system shall allow a PM or above to initiate an export from the project menu by selecting: (1) view type, (2) date range, and (3) output format (.xlsx or .pdf).	Must	BO-1, BO-2, UC-005
FR-016	The system shall support View Type 1 — Task List — containing columns: Task Name, Assignee, Status, Due Date, Priority, and Created Date.	Must	BO-1, UC-005
FR-017	The system shall support View Type 2 — Project Progress Summary — containing: overall completion %, on-track/at-risk/overdue flag, total tasks, completed tasks, and open blockers list.	Must	BO-1, UC-006
FR-	The system shall support View Type 3 — Team Workload — containing:	Must	BO-1, UC-

ID	Requirement	Priority	Traces To
018	tasks grouped by assignee, task count per assignee, and hours logged per assignee (if FT-002 is active).		007
FR-019	The system shall generate and trigger the file download within 10 seconds for project datasets of up to 1,000 tasks.	Must	BO-1
FR-020	The system shall include a header in every exported file showing: project name, export date, exported by (user name), and date range selected.	Must	BO-1
FR-021	The system shall restrict Client role users to downloading only exports that have been explicitly shared by a PM or above.	Must	BO-1

UI Reference: FT-001-WF-01 (Export Modal) & FT-001-MK-01 (PDF Mockup)

3.4 FT-006: Bulk Action

The system shall allow authorised users to apply changes to multiple tasks simultaneously.

ID	Requirement	Priority	Traces To
FR-022	The system shall allow a PM or above to select multiple tasks via checkboxes in the Task List view. A "Select All" option shall be available to select all visible tasks (current page).	Must	BO-1, UC-008
FR-023	The system shall display a floating action bar when one or more tasks are selected, showing: selected count and available actions (Change Status, Reassign, Change Due Date, Delete).	Must	BO-1, UC-008
FR-024	The system shall allow bulk status change by presenting a dropdown of available statuses. Upon confirmation, the system shall update all selected tasks to the chosen status.	Must	BO-1, UC-008
FR-025	The system shall allow bulk reassignment by presenting a list of project members. Upon confirmation, the system shall reassign all selected tasks and trigger an assignment notification (FT-003) to the new assignee.	Must	BO-1, UC-009
FR-026	The system shall require a confirmation dialog for any bulk action	Must	BO-1

ID	Requirement	Priority	Traces To
	affecting more than 10 tasks, displaying: "This action will affect [N] tasks. Are you sure?"		
FR-027	The system shall require the user to type the word "DELETE" in a confirmation field before executing a bulk delete operation. Bulk delete shall be a permanent action.	Must	BO-1, UC-010
FR-028	The system shall create an individual audit log entry for each task affected by a bulk action, recording: action type, previous value, new value, performed by, and timestamp.	Must	BO-1
FR-029	The system shall restrict Member role users to bulk actions only on tasks assigned to them. Members shall not be able to bulk-modify tasks assigned to other users.	Must	BO-1

3.5 FT-003: Notification System

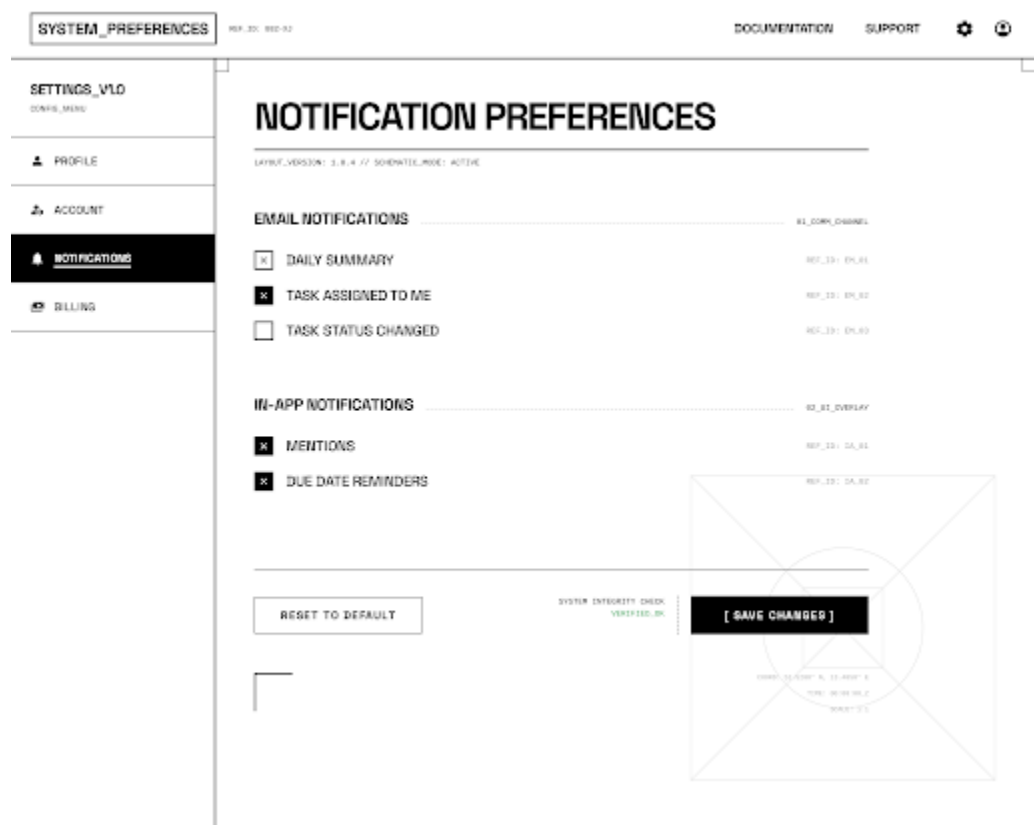

The system shall deliver real-time notifications to users via in-app and email channels based on configurable trigger events.

ID	Requirement	Priority	Traces To
FR-030	The system shall send a notification when a task is assigned to a user. The notification shall include: task name, project name, assigned by (user name), and a direct link to the task.	Must	BO-1, UC-011
FR-031	The system shall send a notification when a task becomes overdue (due date has passed and status is not "Done"). The notification shall be sent to both the task assignee and the project PM.	Must	BO-1, UC-012
FR-032	The system shall send a notification when a comment is added to a task. The notification shall be sent to the task assignee and any user who has previously commented on or is "watching" the task.	Must	BO-1, UC-013
FR-033	The system shall send a notification when a task status changes. The notification shall be sent to the task assignee and the project PM.	Must	BO-1
FR-034	The system shall deliver in-app notifications within 60 seconds of the triggering event being saved in the database.	Must	BO-1
FR-035	The system shall display in-app notifications via a bell icon in the top navigation bar. The bell shall show an unread count badge. Clicking the bell shall display a dropdown list of recent notifications (most recent 20).	Must	BO-1
FR-036	The system shall allow any user to configure their notification preferences via Settings > Notifications. The preference table shall show: trigger types as rows (Assigned, Overdue, Comment, Status Change) and channels as columns (In-App, Email). Users shall toggle ON/OFF per cell.	Must	BO-1, UC-014
FR-037	The system shall default all email notification preferences to OFF for new users. In-app notifications shall default to ON for all trigger types.	Must	BO-1
FR-	The system shall prompt first-time users (after FT-003 release) to review and	Should	BO-1

ID	Requirement	Priority	Traces To
038	configure their notification preferences before dismissing the setup prompt.		

UI Reference: FT-003-WF-01 (Notification Dropdown) & FT-003-WF-02 (Preference Panel)

3.6 User Interface Requirements

ID	Requirement	Feature
FR-039	The system shall display a "Time Tracking" tab within the task detail panel, showing: timer controls (Start/Stop), manual entry form, and time log history for the current task.	FT-002
FR-040	The system shall display an "Export" button in the project header menu, visible only to PM, Admin, and Owner roles.	FT-001
FR-041	The system shall display task selection checkboxes in the Task List view, visible to PM, Admin, and Owner roles. Member role shall see checkboxes only on their own tasks.	FT-006

ID	Requirement	Feature
FR-042	The system shall display a notification bell icon with unread count badge in the top navigation bar, visible to all authenticated users.	FT-003

3.7 Data Requirements

3.7.1 Data Storage

ID	Requirement
FR-043	The system shall store time log entries with the following attributes: id, task_id, user_id, start_time, end_time, duration_minutes, date, note, created_at, updated_at, updated_by, is_deleted.
FR-044	The system shall store notification records with: id, user_id, trigger_type (assigned/overdue/comment/status_change), task_id, message, is_read, created_at.
FR-045	The system shall store notification preferences with: user_id, trigger_type, channel (in_app/email), is_enabled.
FR-046	The system shall store project hourly rate: project_id, hourly_rate_vnd, updated_at, updated_by.

3.7.2 Data Validation

ID	Requirement
FR-047	The system shall reject time log entries where duration_minutes is zero or negative.
FR-048	The system shall reject time log entries where the date is in the future.
FR-049	The system shall reject hourly rate values that are zero or negative.
FR-050	The system shall enforce that only one timer can be active per user at any time. Starting a new timer while one is active shall prompt the user to stop the existing timer first.

3.8 Integration Requirements

ID	Requirement	Feature
FR-051	The system shall integrate with a transactional email service (SendGrid, AWS SES, or equivalent) to deliver email notifications. The email service must support a minimum throughput of 10,000 emails per day.	FT-003
FR-052	The system shall integrate the Export module with a server-side file generation library capable of producing both .xlsx (OpenXML) and .pdf formats.	FT-001

4. Non-Functional Requirements

This section defines the quality attributes the system must satisfy. Each requirement is measurable and testable.

4.1 Performance Requirements

ID	Requirement	Measurement
NFR-001	The system shall save a time log entry (timer stop or manual add) with a round-trip response time of under 2 seconds.	API response time measured at server. P95 < 2s.
NFR-002	The system shall generate and deliver an export file (.xlsx or .pdf) within 10 seconds for datasets of up to 1,000 tasks.	Time from "Download" click to browser download start.
NFR-003	The system shall dispatch notification events to the notification queue within 10 seconds of the triggering action being saved.	Queue latency measured from DB commit to queue entry.
NFR-004	The system shall support at least 50 concurrent users performing time logging, exporting, or bulk actions without degradation below the response time targets defined above.	Load test with 50 simulated users.

4.2 Security Requirements

ID	Requirement
----	-------------

ID	Requirement
NFR-005	The system shall enforce role-based access control on every API endpoint. Unauthorised access attempts shall return HTTP 403 and be logged.
NFR-006	The system shall isolate all time tracking, billing, and export data per agency account. No user shall be able to view or query data from another account (data isolation constraint CN-04).
NFR-007	The system shall use HTTPS (TLS 1.2+) for all client-server communications.
NFR-008	The system shall log all permission-change events, bulk actions, and time log modifications for audit purposes with timestamp, user ID, and action detail.

4.3 Usability Requirements

ID	Requirement
NFR-009	The system shall be fully functional on Chrome (latest 2 versions), Firefox (latest 2 versions), Safari (latest 2 versions), and Edge (latest 2 versions).
NFR-010	A new user shall be able to log their first time entry within 3 minutes of accessing the Time Tracking tab, without external documentation.
NFR-011	The system shall display clear, actionable error messages for all validation failures. Error messages shall identify the field and the required correction.
NFR-012	The notification preference panel shall be accessible within 2 clicks from the main navigation (Settings > Notifications).

4.4 Reliability Requirements

ID	Requirement
NFR-013	The system shall maintain 99.5% uptime availability during business hours (08:00–18:00 ICT, Monday–Friday).
NFR-014	The system shall not lose any time log data in the event of a server crash. All time log writes

ID	Requirement
	shall be committed to the database before returning a success response to the client.
NFR-015	The system shall retry failed email notification deliveries up to 3 times with exponential backoff before marking the notification as "failed" in the audit log.
NFR-016	The system shall back up all time tracking and notification data daily, with point-in-time recovery capability for the most recent 7 days.

5. Constraints and Assumptions

This section documents the technical and business constraints that bound the solution, and the assumptions that must hold true for the requirements to remain valid.

5.1 Technical Constraints

1. All Q2 features must be delivered within the existing TaskFlow web application architecture. No mobile-native implementation is permitted.
2. The Permission Module refactor must be backward-compatible with all existing API contracts. No breaking changes to current endpoints.
3. Export file generation must be performed server-side. Client-side file generation is not acceptable due to data security requirements.
4. Email notification delivery depends on an external SMTP/transactional email service. The service must support TLS encryption.

5.2 Business Constraints

1. The development team is limited to 4 developers for 11 weeks (Q2 window: 24 March – 13 June 2025).
2. No confirmed budget for external Designer or QA engineer (pending Open Question Q-04).
3. Export MVP is limited to 3 view types. Remaining 9 view types are deferred to Q3.
4. Time Tracking uses a single hourly rate per project (not per task or per role) for Q2 MVP.

5.3 Assumptions

1. Users have access to a modern web browser and stable internet connectivity.
2. The existing TaskFlow database schema can accommodate the new tables (time_logs, notifications, notification_preferences) without requiring a major migration.
3. Email infrastructure (SMTP service) is available and provisioned within Sprint 1 budget.
4. Pilot customers (minimum 3) will be recruited by SH-04 (CSM) before FT-002 beta release.
5. The single hourly rate per project simplification has been validated as acceptable by Agency Director and PM personas.

6. Dependencies

This section identifies external and internal dependencies that may impact the delivery of the requirements defined in this SRS.

6.1 External Dependencies

ID	Dependency	Impact If Unavailable	Owner
DEP-01	Transactional email service (SendGrid / AWS SES) for FT-003 email notifications.	Email notifications cannot be delivered. In-app notifications remain functional.	SH-03 (Tech Lead)
DEP-02	Server-side PDF generation library for FT-001 .pdf exports.	PDF export unavailable. .xlsx export remains functional.	SH-03
DEP-03	Pilot customer availability for FT-002 beta testing (min. 3 active users).	Time Tracking launches without validated real-world usage data.	SH-04 (CSM)

6.2 Internal Dependencies

ID	Dependency	Blocks
DEP-04	FT-007 (Permission Refactor) must be completed and regression-tested before Sprint 2 begins.	FT-002, FT-001, FT-006, FT-003 — all features depend on clean permission

ID	Dependency	Blocks
		model.
DEP-05	BRD (DOC-05) and this SRS (DOC-06) must be signed off before Sprint 2 development starts.	All feature development.
DEP-06	FT-002 (Time Tracking) must be active for View Type 3 (Team Workload) to include hours-logged data in FT-001 exports.	FR-018 (partial — hours column).

7. Risk Assessment

This section identifies risks specific to the requirements defined in this SRS and their mitigation strategies.

ID	Risk	Impact	Probability	Mitigation
RR-01	Incomplete role coverage — requirements fail to address all 5 roles for a feature, causing permission gaps at UAT.	High	Medium	Role Permission Matrix (Scope Doc Section 6) used as mandatory checklist for every FR- before sign-off.
RR-02	Time Tracking edge cases (overlapping timers, midnight crossover, zero-duration) cause billing data integrity issues.	High	Medium	Edge cases documented in FR-006, FR-009, FR-050. Tech Lead reviews during Sprint 2 planning.
RR-03	Notification email volume exceeds SMTP service limits, causing delayed or dropped notifications.	Medium	Low	Email service selected with 10,000+ emails/day capacity (FR-051). Load test before production release.
RR-04	Export performance degrades for large datasets (>1,000 tasks), exceeding the 10-second target.	Medium	Medium	NFR-002 defines the 1,000-task ceiling. Pagination or async export considered if ceiling is exceeded.

ID	Risk	Impact	Probability	Mitigation
RR-05	Ambiguous acceptance criteria cause developers to implement features that do not match user expectations.	High	Medium	Every FR- has Given/When/Then acceptance criteria. BA attends Sprint Review to verify each criterion.

8. Requirements Traceability Matrix

This matrix traces every functional requirement back to its originating Business Objective, Feature, and Use Case — ensuring no requirement is orphaned and every business need is covered.

Requirement ID	Feature	Business Objective	Use Case	Priority	Status
FR-001 to FR-005	FT-007 Permission Refactor	BO-1, BO-2 (enabler)	N/A (internal)	Must	Draft
FR-006 to FR-014	FT-002 Time Tracking	BO-2	UC-001 to UC-004	Must	Draft
FR-015 to FR-021	FT-001 Export Excel/PDF	BO-1, BO-2	UC-005 to UC-007	Must	Draft
FR-022 to FR-029	FT-006 Bulk Action	BO-1	UC-008 to UC-010	Must	Draft
FR-030 to FR-038	FT-003 Notification System	BO-1	UC-011 to UC-014	Must	Draft
FR-039 to FR-042	UI Requirements	BO-1, BO-2	All UCs	Must	Draft
FR-043 to FR-050	Data Requirements	BO-1, BO-2	All UCs	Must	Draft
FR-051 to FR-052	Integration Requirements	BO-1, BO-2	UC-005, UC-011	Must	Draft
NFR-001 to NFR-	Performance	BO-1	N/A	Must	Draft

Requirement ID	Feature	Business Objective	Use Case	Priority	Status
004					
NFR-005 to NFR-008	Security	BO-1, BO-2	N/A	Must	Draft
NFR-009 to NFR-012	Usability	BO-1	N/A	Should	Draft
NFR-013 to NFR-016	Reliability	BO-1, BO-2	N/A	Must	Draft

Traceability Summary: 52 Functional Requirements (FR-001 to FR-052) + 16 Non-Functional Requirements (NFR-001 to NFR-016) = 68 total requirements. All trace to BO-1 and/or BO-2. Zero orphan requirements.

9. Appendices

9.1 Glossary

Term	Definition
SRS	Software Requirements Specification — a document that describes system-level functional and non-functional requirements that the engineering team implements.
FR	Functional Requirement — a requirement describing observable system behaviour ("The system shall...").
NFR	Non-Functional Requirement — a requirement describing a quality attribute (performance, security, usability, reliability).
Time Log	A record of time spent by a user on a specific task, including duration, date, and optional note.
Billing Summary	A calculated report showing total logged hours × project hourly rate, grouped by billing period.

Term	Definition
Bulk Action	A user operation that applies a change (status, assignee, due date, delete) to multiple selected tasks simultaneously.
Trigger Type	A notification event category: assigned, overdue, comment, or status_change.
Data Isolation	The security principle that data belonging to one agency account cannot be accessed by users of another account.
